Queens, NY

Completed: March 2017

## TECHNICAL SKILLS

---

Technical Languages: HTML, CSS, Bootstrap, jQuery, JavaScript, ReactJS, Redux, VueJS

Operating Systems: Windows XP/7/8/10, Linux (Ubuntu)

Software: Git, Cloud9, Heroku

## PROJECTS

---

### Favorite Location Application

April, 2017

- Designed and developed a ReactJS Application that allows users to save a searched location to localStorage in their browser.
- Used Bootstrap to make the application accessible on devices of various screen size.

### Timer Application

March, 2017

- Designed and developed a ReactJS Timer Application that includes a timer and countdown for timekeeping.
- Designed and created reusable components that can be used on future projects/products.

### WikiSearch Application

February, 2017

- Designed and developed a web-based application that uses Wikipedia API to display matching results for a word/phrase.
- Used HTML and CSS to design the frontend layout, and used JavaScript to interact with Wikipedia API.

### Weather Search Application

January, 2017

- Designed and developed a web-based application that shows the current weather information of a given city.
- Used HTML and CSS to design the frontend layout, and used JavaScript and jQuery to retrieve JSON data and display it to the page.

### Quote Machine

December, 2016

- Created a website that shows random quotes from the API of Formatic.com.
- Used HTML and CSS to design the frontend layout, used jQuery to retrieve and display the quote on the page, and designed the API so that it allows the user to tweet their quote on twitter.

## VOLUNTEERING

---

### PowerMyLearning

Queens, NY

Volunteer

January, 2017- Present

- Cleaned computers, activated software, and installed basic software on computers donated to serve children from underserved communities in middle school and to families at workshops.
