ABOUT ME

Hi! I'm an 18-year-old Web Developer with a passion for code. I specialize in creating Websites for people and I'm experienced with creating servers such as LAMP and LEMP stacks. I also have a lot of experience with MySQL databases and maintaining them. I also do a lot of WordPress work which involve editing themes, doing customizations, installing plugins and editing them.

I'm able to meet any deadline that you throw at me because I'm able to manage my time wisely and I'm a very organized individual. I work fast because whenever I'm given a task I never set it aside, I always get started on it immediately! I try my hardest to get things right the first time so I won't have to waste your time trying to go back and fix things. I'm also very good at creating LAMP and LEMP systems! I can easily create servers in no time from the command line or terminal.

- Frindse is a social network that I have been working on all by myself
- Currently I'm rebuilding it on the latest technologies such as SASS, node, and Grunt

EDUCATION

ECOT, Columbus OH – *High School*

August 2013 - June 2017

This is my current high school where I am studying Database Administration, Web design and Web Development

Tri-C, Parma Heights OH – *College*

June 2016 - June 2020

Currently I'm studying IT and business at Tri-C. I'm learning more about Web Development, Web Design, Server Administration and also Database Administration. Plus, I will be learning iOS and Android development.

PROJECTS

Coconutoilcare.com – *WordPress system*

Description: Coconut Oil Care is a WordPress website that I've worked on for the past year. I complete various tasks on here which includes updating the design, tweaking the plugins and functions, and also adding custom functionality to it. I also debug things on this system quickly and efficiently.

SmartSealNY.com – *WordPress system*

Description: Smartseal is a smaller WordPress system that I've worked on for a while. Whenever I get a task for this website I always finish it quickly! I'm tasked with fixing bugs, and adding new functionality to it. Also I make sure that its responsive and ready for mobile systems.

Expecthuge.com – *WordPress system*

Description: I've done a lot of work on the expecthuge.com website which includes fixing issues, customizing the design extensively, and also adding new functions to it.

Event Registrar – *Custom LMS system*

Description: Event Registrar is a very complex LMS system that I do extensive work on daily. I'm tasked with editing things on the back-end and the front end. I'm also tasked with doing a lot of work with implementing things on the server such as GIT systems. I use PHP extensively for this website and can easily get things done.

CusTee.com – *Shopify System*

Description: Custee is a Shopify website that I've worked on for a few months now. I'm tasked with updating the design and making it more responsive!

Yogious.com – *Custom Website*

Description: This is a website that I updated and did a lot of redesigns on. I was able to add a lot of new elements to it and connect various API's to it also. Its built using the Codeigniter framework also which is my go to framework.

Frindse.com – *Custom Website*

Description: This is a very complex system that I've been building all by myself for the past year. It's a huge system and social network that will be released shortly. I plan on making it open source but it uses a lot of the latest technologies including WebSockets.

jameslatten.me – *Custom Website*

Description: This is my custom made WebSite built using a framework that I created myself. It shows who I am and what I do. I also custom made the design and everything else.
